

Project 03 – IAM Security Administration

Objective

Implement secure AWS Identity and Access Management (IAM) controls using users, groups, policies, and Multi-Factor Authentication (MFA).

AWS Services

AWS IAM, Multi-Factor Authentication (MFA)

Key Activities

- Created IAM users and groups
- Assigned permissions using managed policies
- Created a custom JSON policy
- Enabled MFA for enhanced security
- Applied the Principle of Least Privilege

Skills Demonstrated

IAM Administration • User & Group Management • Managed Policies • Custom JSON Policies • MFA • Least Privilege

Outcome

Successfully implemented a secure IAM environment by creating separate administrator and read-only accounts, enforcing least-privilege access, and strengthening account security with MFA.

Project	IAM Security Administration
Primary Service	AWS IAM
Security Focus	Least Privilege & MFA
Result	Secure administrator and read-only access model
